

About Us

100% solid wood

When you choose WEX Trade, you choose the finest-quality worktops made from nothing less than 100% solid wood. Our strong environmental policy ensures our wood is sustainably sourced and that excellence is assured.

Carefully chosen

We are solid wood specialists. Choosing the right timbers for our worktop collection has been more than a simple quest for variety: it's a matter of pride. As such, we have built up a diverse collection of species – the largest in the UK – over our years of trading. Classic timbers mingle with the exotic and dramatic: from oak and beech to zebrano and wenge, there is a worktop to suit every taste.

Carefully crafted

WEX Trade worktops are manufactured only in Europe with cutting-edge machinery. We hold our entire range in stock in the UK – at all times. What is more, though we stock a comprehensive range of standard worktop sizes and thicknesses, our experienced team can also accommodate requests for bespoke orders as part of our fabrication service.

Welcome to the incomparable beauty of solid wood.
Welcome to WEX Trade.

Oak and Prime Oak Worktops

Our most popular collection. Comprised solely of European oak timber, these worktops showcase the charms of a species famous for its characterful grain and traditional associations. We offer two types of oak worktop - Standard and Prime - in various constructions.

wextrade
worktops

Oak

Oak is blessed with a strong, naturally attractive grain. The timber matures and darkens over time to produce a striking, durable and highly versatile worksurface.

Prime Oak

For a flawless finish with very few natural imperfections, look no further. A Prime Oak worktop provides a uniform, sleek surface that will blend seamlessly into a traditional or modern kitchen.

WEX Trade offers solid wood worktops in a stunning variety of timbers, and in two formations: standard and full stave.

Standard Range

Each standard worktop is constructed from 40mm wide, high-pressure glued, finger-jointed staves.

Beech

One of our most enduringly popular worktops. This distinctive timber has a prominent grain and will grow more beautiful with age, creating a work surface with unique, rustic charm.

Prime Beech

Our Prime Beech worktops share the unique charms of their standard variant but are constructed from timbers specifically chosen for delicacy and consistency. The soft grain and even colour lends a brightness to the finish of this superior worktop.

Ash

A light and attractive - but even more hard-wearing - alternative to oak is our European ash timber, which features a distinctive grain with both linear and curly features. The detailed figuring and golden colour make it ideal for both classic and contemporary kitchens.

Walnut

Walnut worktops have an innately decorative appearance due to the unique, wavy grain and naturally rich colour variation. One of our most popular worktops and sure to bring stylish warmth to any kitchen.

All worktops are supplied fully sanded to a sleek, 150 grit finish. The worktops are supplied in this natural unfinished state so that prior to installation any further finishes may be applied according to the customer's preference.

Black Oak

Our Black Oak worktops are specially treated for a luxurious, dark aesthetic that is similar to wenge, but at a more accessible price. Time is taken to ensure that each worktop that undergoes this unique darkening process is coloured throughout the entire depth of the timber. This means they can still undergo a variety of fabrications such as drainage grooves.

Black American Walnut

The rich colour of black walnut is matched by its equally striking grain pattern. The naturally dark surface will mature over time to a stunning depth of colour: almost black, as the name suggests.

Iroko

An exotic African timber which couples beauty with durability. Perfectly hygienic and hardwearing due to the timber's naturally high oil content, the iroko's attractive golden surface will mature into a magnificent russet shade soon after installation.

Bamboo is a wonderfully durable and sustainable worktop material. Available in two colours – pale gold and rich caramel - this type of worktop differs from the majority in that its surface is made up of an innovative formation of compressed individual sections.

Bamboo

Caramel Bamboo

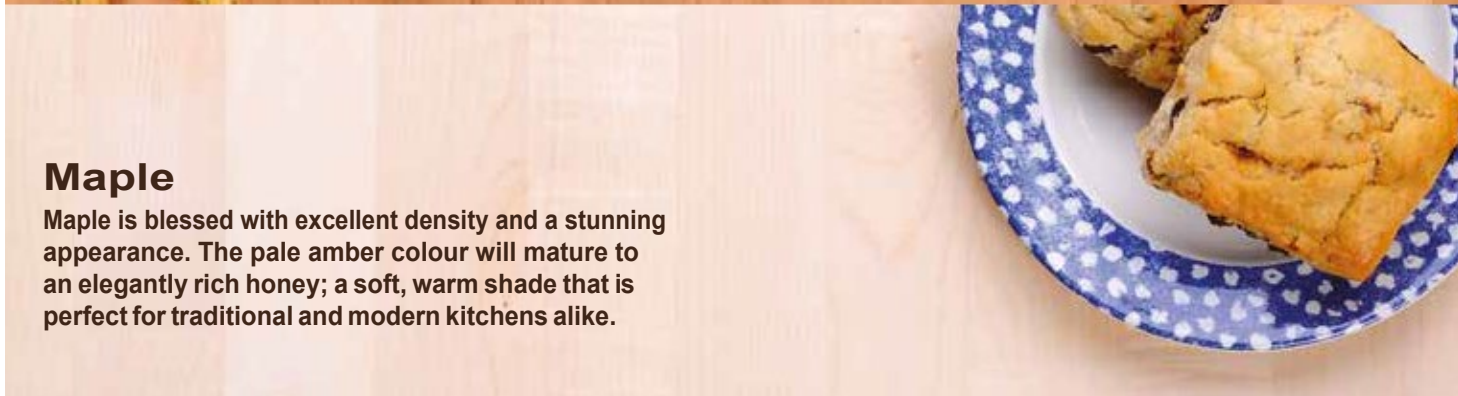

We can provide each worktop in a variety of lengths (2m, 3m, 4m), widths (620mm, 720mm, 960mm) and thicknesses (27mm, 40mm). Some of our core range are also available in wider boards, please enquire for details. Edges are square as standard.

We can also accommodate bespoke requests. Please view our 'specialist options' page or enquire for more information.

Cherry

A cherry worktop is sure to brighten up any kitchen as only a superior natural product can. Both distinctive and vibrant, the unique caramel figuring gleams with colourful warmth.

Maple

Maple is blessed with excellent density and a stunning appearance. The pale amber colour will mature to an elegantly rich honey; a soft, warm shade that is perfect for traditional and modern kitchens alike.

Zebrano

Zebrano is an exotic, robust timber. The dark brown grains meld with the beautiful golden surface colour to create the delicate, 'zebra'-like appearance suggested by its name. Over time, the surface hue will darken to a beautifully rich toffee.

Wenge

Wenge is a truly superior timber. 50% more dense than oak, worktops constructed from wenge are both attractive and immensely hardwearing. The exquisite formation of dark brown and black grains creates a dramatic finish that will imbue any space with flair.

A selection of the timbers we stock are available as part of our full stave range - featuring wider, longer staves, these options showcase the natural grain and beauty of the wood.

Full Stave Worktops

.....

This luxurious worktop option allows true appreciation of each timber's delicate grain pattern. Full stave wood worktops are constructed from wider, 90mm planks of timber that run the full length of the worktop, highlighting the natural charms of each species as only a fuller stave can. The result is a uniquely versatile worktop that functions as both an eye-catching feature and a faithful worksurface.

Bespoke Wood Worktops

.....

The beauty of solid wood is that it can be cut and shaped exactly to your requirements. We want our customers to truly enjoy the flexibility only offered by this wonderful natural material; and so, alongside our extensive range of standard worktops, we also provide a bespoke cutting service.

Whatever your needs, be it cutting to size, sink cut-outs, or edge profiling, our experienced fabrication team is on hand to help.

Cutting

Using the latest high-calibre machinery, we can cut to your precise measurements and professionally rout apertures for any size of sink or built-in hob, using bespoke templates to ensure an accurate finish. We can also accommodate taps, drainage grooves and irregular cutouts.

Edges and Corners

To customise your finish, we recommend opting for an edge profile, ellipse end or radius corner. Edge profiling is invaluable for protecting your worktop, creating a hardwearing edge and softening any sharp extremities.

Continue with curves by opting for an ellipse end or radius corner: two of our most popular bespoke options. Adding an ellipse end to your worktop creates an extra area perfect for entertaining or preparation, while the streamlined finish of a radius corner is an ideal safeguard for high-traffic areas.

Bespoke Sizes

In addition to providing custom cut-outs and other bespoke options, we can also provide worktops of bespoke sizes and thicknesses. Please enquire for more information.

Laminate Worktops

WEX Trade is pleased to offer a large selection of striking laminate worktops. They are carefully designed to provide a truly accurate representation of a solid wood, slate, stone or marble surface, giving our customers the flexibility of choosing the ideal worktop to suit their dream kitchen. All our laminates are affordable but, most importantly, they also abide by our stringent quality standards. Customers choosing these worktops can be assured that they are incredibly hard-wearing and durable.

Cut and Edge

Our bespoke cutting service means we can cut a laminate surface just as easily and efficiently as solid wood worktops thanks to our investment in the very latest machinery. Alterations to laminate worktops will adhere to your precise measurements for a perfect fit, taking out the time and effort of cutting to size on site. Furthermore, our edging and machining service means you will receive the worktop finished and ready for a quick and easy installation.

Fabrication and Corners

Let us provide the finishing touches to your worktop by choosing either an edge profile, radius end or radius corner. Our decors are offered in a range of 3mm, 6mm or square edge profiles – information on which décor has which finish can be acquired via our sales team as the range constantly expands.

For a stylish, flowing look, incorporate a curved section into your square edged worktop by picking one of our most popular bespoke alterations – radius ends or radius corners. A radius end can offer a fantastic space for preparing food or entertaining, while a radius corner is perfect for busy kitchens because it prevents people catching a sharp edge – it looks smooth and smart, too.

Laminate Worktops

.....

Our ever-expanding range of laminate worktops ensures we can cater for more of your customers' dream kitchens than ever before, while retaining our ethos of offering quality products at an affordable price. When planning a kitchen redesign, our laminate selection provides more choice and opens up new styles and ideas for a cooking area.

We are delighted to stock more than 30 different finishes, including surfaces that resemble solid wood, granite, stone, marble and even glass. There really is something to suit every kitchen, from traditional styles to more contemporary designs and everything else in between.

The laminate worktops we supply are sourced just as carefully as our solid wood options. Manufactured and stocked solely in the UK, they are constructed to FIRA Gold standards to ensure the quality of the products used. Incredibly durable and capable of holding their own

in busy kitchens, all our laminate worktops are available at WEX Trade's famously low prices.

Laminate worktops are available in 3m x 600mm lengths, with select decors available in lengths of up to 4.1m and widths up to 900mm, alongside a variety of accessories. We also offer a bespoke fabrication service to customise laminate worktops to requirements, making it as easy and convenient as possible to get the perfect-sized surface. Utilising the latest high-calibre machinery, we can cut lengths, radius corners and radius ends with precision and ease. You will not need to cut into the worktop to make holes for hobs, taps or overmounted sinks if you opt for our bespoke service, because we will do all of this to ensure the appliances fit to perfection.

Further laminate worktop decors will be added to our range as it continues to grow, so check our website regularly for the latest product updates.

Restaurant Table Tops

Whether for use in the home, a restaurant, café or bar, our range of solid oak table tops are an exceptional, hard-wearing surface that are constructed from the same fine quality timber as used for our wooden worktops.

Choose from pre-made square, rectangular and circular options, constructed from either 40mm or 20mm wide oak staves and sanded to an exceptionally fine finish.

Our table tops are provided unfinished and without any base, though we can offer pre-oiling or lacquering treatments should you wish to install them immediately upon arrival.

If you are looking for a table top in a bespoke timber type, thickness, shape or size, then our on-site fabrication team can help – do get in touch for further details.

Solid Wood Shelves

Create additional storage in any kitchen, office or living space with our solid wood floating shelves. Made from the same excellent quality timber as our wooden worktops, these shelves are cut with precision machining to accommodate hidden brackets.

Available in standard sizes measuring from 300mm to 1500mm long, 200mm deep and 40mm thick, each shelf is provided with 2 - 4 brackets and is pre-drilled so that you may mount them on any suitable solid wall.

We keep a selection of floating shelves in stock as standard, but can also fabricate our shelves to almost any size from any of the timbers available in our solid wood worktop collection. Our standard range includes Oak, Euro Walnut, Beech, Ash, and Black Oak with prices starting from just £20.

Samples

For an example of the quality you can expect from WEX Trade, we invite you to view our samples.

Each solid timber sample is 200mm x 150mm x 40mm, allowing our customers to truly appreciate the weight, quality and finish of each worktop option.

Our samples are fully sanded and have been finished with one coat of oil to the top side to give a valid indication of the finished article. The bottom side is unfinished so that you may see the timber in its natural form.

Our laminate sample swatch is also available on request.

Environmental Policy

An intense commitment to sustainability has been a lynchpin of our business model since its inception.

This approach is twofold: we only source timber from areas with established replanting programmes and we promote environmental practice with minimal wastage wherever possible.

- For our European species, we only manufacture from wood that is milled sustainably and carries FSC certification.
- For our American species, we only manufacture from wood that is milled at one of the largest national plants and carries PEFC certification.
- For our exotic African species, we only manufacture from wood that is purchased legally. These manufacturing plants are subject to strict monitoring and we continually seek proof that the necessary sustainability procedures are being implemented.

All the timber purchased by us – from any source -is logged from sustainable forests with well-established replanting programmes.

The very construction of our worktops (solid timber panels - or staves - which are fingerjointed) means that waste is extremely minimal. Any resultant wood waste is used to create samples and byproducts; or, in the final instance, unusable solid wood offcuts are used to fuel our newly instated biomass boiler, which heats our main warehouse. We also have a self enclosed extraction system for capturing and recycling emissions. The majority of our in-house finishing products (Danish oil, wax etc) are natural.

We are proud to supply high-quality products that are both eco-friendly and encourage biodiversity.
